

## Farm to Fork: Opportunities & Challenges

The European Green Pact, through the “Farm to Fork” or “From Farm to Table” strategy, promotes the European agricultural and agri-food sector as one of the main players in achieving the goal of turning Europe into the first continent climate neutral in 2050.

To achieve this goal, biotechnology will be one of the essential tools, through different ways, such as new genomic editing techniques, pest and disease control or animal health.

The potential to foster genuine change in the EU food systems will depend, however, in the resolution of different challenges such as the definition of the concept of food sustainability or the strategy’s objectives versus its legal implementation by each member state or the legislation regarding new genomic editing techniques.

In this panel we will discuss how the Farm to Fork Strategy can be a transforming tool for our industry and for society in general, highlighting the challenges we must overcome in the process of its implementation.

### Moderator:

- **César Marcos Cabañas** – Coordinator & Communications Manager, ALAS / Reporter on El Economista

### Speakers (pending confirmation):

- **Richard Borreani** – Agricultural Policy & Stakeholders Affairs Manager, Bayer Crop Science Iberia
- **Carlos Rodriguez-Villa Föster**. Managing Director, Algaenergy
- **Representante de la administración** (por concretar)
- **Representante de ALAS**
